Comments: Location; Township 20S Range 17E Section 28 & 20; All points taken in (NAD27). Stream is identified as site # 7 west of Cotton Creek on the master map. U of A P-line was used for reference throughout surveys.

Stream characteristics: Site 7 flows into Site 10 below the P-line. 1.5-2m wide .2-.4m deep. Gravel substrate. LWD found throughout the system. Large pools also found. Site 7 has 4 tributaries, three south of the P-line and one north of the P-line. Due to time constraints these tributaries were not surveyed. See excel sheet for GPS points and further description.

Stream surveys were part of the U of A Helicopter Cruise. Field crews surveyed streams using baited minnow traps. Soak times for traps were usually less than 30 minutes per trap/ two traps per sample site. Captured fish were identified and released on-site. Field teams were comprised of ADF&G personnel.
